

SCAN2

TURN YOUR HARDWARE
INTO INTELLI-WARE

YOUR 1ST STEP TOWARDS DIGITAL AUTOMATION

SIMPLICITY

PRODUCTIVITY

TRACEABILITY

TECHNOLOGY SHOULD MAKE YOUR BUSINESS PROCESSES SIMPLER.

And that is exactly what Scan2x has been built to do, by streamlining scanning and document management into one easy-to-use process. It couldn't be easier.

Scan2x presents new-generation scanning technology that's intelligent enough to know what it is scanning.

For instance, if an invoice is scanned, Scan2x can be set to extract key information from the document and forward it straight to your Accounts Department automatically. Invoice line items can be extracted and posted into your business application for further processing, while notifications can be sent to related parties. All in one streamlined action.

This cutting-edge technology is all about making your documents work harder for you. By using the information on them to automate your business processes, Scan2x allows users to get on with running the business safe in the knowledge that the tedious task of consistent document capture is taking care of itself.

KEY FEATURES

- Scans and processes any type of document.
- Intelligent document type recognition using AI (Artificial Intelligence) technologies.
- Automatically extracts data from documents via different technologies.
- Ability to save extracted data to different destinations.
- Available out-of-the-box configurations for HR, Accounts and Document Archives.
- Inbuilt modules for ID cards, passports and cheques scanning.
- Customisable to fit your business specific requirements.
- Integration with 3rd party software and support for API technologies.
- Native MEAP application to run Scan2x on Canon Multi-Functional devices.
- Supports workflow automation.
- Different licensing models, on premise and cloud versions available.
- Available in mobile version. [coming soon]
- Free online courses for users and admins.
- Supports multiple languages.
